What effective strategies would be used to teach College Student grammar, punctuation, sentence structure and errors independently online?

Question

Asked June 10

We have been trying Khan Academy and NoRedInk but apparently, this doesn't yield many results because students don't apply the skills learnt independently and transfer them into Academic Writing. **What strategies would you propose?**

Here are some strategies that may help college students learn grammar, punctuation, sentence structure, and error independently online:

Gamification: Designing games around topics such as punctuation, grammar, sentence structure, and error spotting can be beneficial in capturing students' attention and making learning more fun and engaging.

Personalized Feedback: Providing personalized feedback to students can help them identify their errors and thus, take the necessary steps to correct them. Interactive exercises, quizzes, and assessments with instant feedback can be helpful in this regard.

Peer Review: Peer review sessions can be helpful in creating motivation for college students to learn grammar, punctuation, and sentence structure. Additionally, giving students the opportunity to peer review one another's work encourages them to practice their writing skills.

Practical assignments: One way to help students apply grammar and writing skills learned in online courses is to provide practical assignments that require students to use the language constructively. These assignments can include writing essays, articles, and other types of academic writing that allow students to apply their language skills.

Interactive videos: Interactive videos that introduce grammar and sentence structure can be useful in making the learning process more interesting. They can have quizzes, interactive exercises and provide instant feedback at a pace that suits the learner.

These strategies have proven successful in surrounding projects as they offer a hands-on learning experience and would be effective in teaching college students online.

Teaching college students punctuation, grammar, and errors independently online can be very challenging, but I can suggest to you, based on my humble experience of teaching, several effective strategies that can be used to make the process engaging. As a first step, you may try interactive exercises which allow students to practice identifying and correcting errors using quizzes, games, and o ... [Read more](#)
